

## Interactive JavaScript Calculator & To-Do App

DOMAIN: WEB DEVELOPMENT

TIMELINE: WEEK 2

RELEASE: BATCH 2026

### 1. Project Scope & Description

Create a modern, fully functional dynamic calculator and a persistent To-Do list application that stores tasks in LocalStorage and handles user input events.

### 2. Key Technical Requirements

- 1. Manipulate the DOM dynamically using JavaScript queries.
- 2. Persistent state: Save list items inside localStorage.
- 3. Implement event listener hooks for additions/deletions.

### 3. Assignment Submission Guidelines

**%<sup>a</sup> GitHub Repository:** Create a public repository on GitHub. Push your source code files regularly and write a professional README.md with screenshots and setup instructions.

**%<sup>a</sup> LinkedIn Sharing:** Write a brief post sharing what you built, what technologies you used, and what you learned. Tag @Jobify and attach a screenshot/video.

**%<sup>a</sup> Portal Submission:** Paste both your public GitHub repository URL and your LinkedIn post URL inside the student assignment submission panel.

#### **& p CRITICAL SUBMISSION POLICIES:**

Verify that your GitHub repository visibility is set to public. Private links cannot be analyzed by our automated evaluation engines and may lead to credit deductions.
