

Weather Web App with Live API Integration

DOMAIN: WEB DEVELOPMENT

TIMELINE: WEEK 4

RELEASE: BATCH 2026

1. Project Scope & Description

Create a web application that fetches live weather forecasts from a public API (like OpenWeatherMap) and displays temperature, humidity, and atmospheric conditions dynamically based on search inputs.

2. Key Technical Requirements

- 1. Construct async HTTP GET calls using Axios framework.
- 2. Implement loading skeleton cards and search query parameters.
- 3. Handle network timeouts or invalid location queries gracefully.

3. Assignment Submission Guidelines

%^a GitHub Repository: Create a public repository on GitHub. Push your source code files regularly and write a professional README.md with screenshots and setup instructions.

%^a LinkedIn Sharing: Write a brief post sharing what you built, what technologies you used, and what you learned. Tag @Jobify and attach a screenshot/video.

%^a Portal Submission: Paste both your public GitHub repository URL and your LinkedIn post URL inside the student assignment submission panel.

& p CRITICAL SUBMISSION POLICIES:

Verify that your GitHub repository visibility is set to public. Private links cannot be analyzed by our automated evaluation engines and may lead to credit deductions.
